

## **AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph at page 4, lines 11-15, with the following paragraph rewritten in amendment format:

Accordingly, in 1984, the RFC882 and RFC883 were developed which specified the domain name system, and, later, updated to the RFC1034 and ~~FRG1035~~ RFC1035 which became the present Domain name specifications.

Please replace the paragraph at page 12, lines 23-27 thru page 13, lines 1-4 at, with the following paragraph rewritten in amendment format:

In FIG. 3 4, if the module is completely installed in the users' operating system, executed or executing programs are checked(S303) by using a check module function(S302) of the x-DNS application engine module users can execute under the overall windows operating system(S301). If corresponding programs are found, the x-DNS service application engine module is executed to be driven in the process images of the programs(S304) and applied for use to the related programs, for example, web browser programs, Telnet programs, animation DVD programs, and so on(S305).
